VICTOR IWATANNAYE

PROFESSIONAL SUMMARY

Senior Software Engineer with 6+ years of experience designing, building, and scaling backend systems, fintech products, banking applications, and cloud-native services. Experienced in developing secure financial platforms, distributed systems, REST APIs, and microservice architectures serving thousands of users. Strong expertise in Node.js, TypeScript, Golang, PostgreSQL, MySQL, AWS, Docker, and Kubernetes, with a proven ability to own systems end-to-end—from architecture and database design to deployment, monitoring, and production support.

Passionate about building reliable, maintainable, and high-performance software where correctness, scalability, and customer trust are critical.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Golang, PHP

Backend Technologies: Node.js, NestJS, ExpressJS, AdonisJS, REST APIs, Microservices

Databases: PostgreSQL, MySQL, MongoDB, Redis, Firebase

Messaging & Event-Driven Systems: RabbitMQ, Kafka

Cloud & Infrastructure: AWS (EC2, RDS, S3), Docker, Kubernetes, DigitalOcean

Testing & Quality: Jest, Mocha, Test-Driven Development (TDD)

DevOps & CI/CD: Git, GitHub, GitLab, Bitbucket, CI/CD Pipelines

Frontend: React.js, React Native, Redux

PROFESSIONAL EXPERIENCE

Acumen Digital – Senior Full-Stack Software Engineer

February 2021 – Present

- Led backend development and architecture for fintech, digital banking, lending, and financial services platforms.
- Played a key role in the development of digital banking solutions for financial institutions, including customer onboarding, account management, loan processing, and transaction workflows.
- Contributed to the development and enhancement of banking solutions for Focus MFB, building secure APIs and backend services supporting customer-facing and operational banking functions.
- Designed and implemented scalable microservice architectures that improved platform reliability, maintainability, and performance.
- Built secure RESTful APIs for lending-as-a-service products, credit scoring systems, and financial transaction processing.
- Designed and optimized PostgreSQL and MySQL database schemas, improving query performance and data integrity.
- Developed integrations with third-party financial service providers, payment platforms, and banking systems.
- Implemented asynchronous processing and event-driven workflows using messaging systems to improve system scalability and resilience.
- Built reusable backend templates and engineering standards that reduced project setup time by 50% and improved development consistency across teams.
- Collaborated closely with product managers, designers, QA engineers, and frontend developers to deliver business-critical features.
- Participated in code reviews, mentoring activities, and engineering best practices to maintain high code quality.
- Supported production systems, troubleshooting critical issues and ensuring platform availability and reliability.

Kinly USA – Mobile Software Developer (Contract)

September 2021 – February 2022

- Contributed to the development and maintenance of a digital banking application serving customers across multiple platforms.
- Collaborated with backend teams to implement secure financial workflows and customer-facing features.
- Maintained high application availability and performance through proactive testing, monitoring, and issue resolution.

- Improved user experience and platform stability through rapid iteration and production support.

Leni Labs – Full-Stack Software Developer

August 2019 – January 2021

- Developed web applications and backend systems for e-commerce, logistics, and educational platforms.
- Designed and implemented REST APIs supporting business operations and customer-facing applications.
- Built administrative dashboards and reporting tools that improved operational efficiency and business visibility.
- Integrated third-party services including mapping and geolocation systems to support logistics workflows.

SELECTED ACHIEVEMENTS

- Built and maintained financial systems supporting lending, banking, and transaction processing workflows.
- Designed scalable microservice architectures serving thousands of users across multiple industries.
- Improved platform scalability and performance by over 30% through architectural improvements and database optimization.
- Reduced backend project setup time by 50% by creating reusable engineering templates and standards.
- Led engineering teams, code reviews, mentorship programs, and technical decision-making processes.

EDUCATION

Bachelor of Science (B.Sc.) Computer Science

University of Lagos
